ABSTRACT

Provided is a list of associations and committees of or for women in science, engineering, mathematics, and medicine. The list is organized by discipline, with cross-referencing to cognate specialties. The disciplines include: anthropology; astronomy; atmospheric sciences; biology; chemistry; computer sciences; earth sciences; energy; engineering; history of science and technology; linguistics and speech; mathematics and statistics; medicine and health; physics; psychology and psychiatry; science; and social sciences. Geology and geography entries are listed under earth sciences, meteorology under atmospheric science, and science education under biology, mathematics, and physics. Each entry includes address, telephone number, contact person, the year founded, and (when applicable) information on dues, membership, chapters, publications, services, current activities, and future plans. An index of association, committee, and caucus names is included, with separate lists for women's committees and caucuses of scientific societies and for associations of and for women in science. Production of this list was supported in part by the National Science Foundation (Contract No. SPI77-27279). Any opinions, conclusions, or recommendations expressed herein are those of the authors and do not necessarily reflect the views of the National Science Foundation.

The compilers gratefully acknowledge the assistance of Jeanne McDaniel of the Federation of Organizations for Professional Women, 1825 Connecticut Avenue, N.W., Suite 403, Washington, DC 20009, who made her material for updating FOPW directories of women's organizations available to us. Users of our list may want to acquire the FOPW publications which describe women's professional and educational groups, many of which are interested in science and have scientists among their members.

This list is organized by discipline, with cross-referencing to cognate specialties. Users should consult the broad category of science as well as the specialized entries. When a datum was not known or not applicable (e.g., dues for committees), it was omitted. Data were supplied by the organizations themselves. While committees usually listed only the number of members of the committee, in fact, committees reach large numbers of women through newsletters and other means. They should be included in mailings for that reason.

Lists such as this remain up to date for relatively short periods of time. Users are encouraged to set up their own "network" to keep the information current.

An index of association, committee, and caucus names can be found at the end of the list.

This document may be copied and distributed for non-commercial purposes provided credit is given to AAAS as originator.
